

Operational Benefits

- > Real-time intelligence gathering and decision-making
- > Customized to customers' tactical and strategic needs
- > Applicable to wide range of platforms
- > Fully operational while stationary and in-motion
Comfortable, ergonomic and future-proof design

Key Features

- > Real-time VISINT and COMINT capabilities
- > Advanced communication systems (cellular or SATCOM)
- > Independent energy system
- > Equipped with state-of-the-art sensors
- > Full climate control
- > Flexible platform options, can be installed on-site

Command, Control, Communication & Surveillance

Special Vehicle For Multi-Purpose Operations

For counter-terrorism and crime prevention, law enforcement agencies must be able to gather critical intelligence and respond in real-time. Special operations vehicles are required for visual and communications intelligence gathering, fully integrated with command and control capabilities.

YTS has a proven track record of defining, engineering and integrating multi-purpose, command and control vehicles. Leveraging years of operational experience, YTS delivers highly advanced vehicles that operate as dual-purpose information gathering and command centers. The vehicles are equipped with state-of-art audio and visual intelligence equipment, as well as a full range of command and control equipment, enabling real-time decision-making in the field. Information can be transmitted in real-time via a cellular or satellite network. YTS vehicles are operational within the Israeli government and military agencies and Special Forces, as well other law enforcement agencies across the globe.

Fully customized platform for real-time intelligence gathering and decision making

Advanced engineering with flexible platform options

Equipped with audio & visual intelligence equipment

Interior of front compartments

Continuous communication of commanders with remote HQ

Relevant for real-world scenarios

YTS vehicles integrate real-time intelligence and command and control capabilities into a single vehicle, effectively enhancing the operational efficiency of governments and law enforcements agencies.

Fully customizable

Using lightweight materials, each vehicle is completely tailored to meet the operational needs of the individual customer. The vehicle's equipment manufactured in YTS facilities, and then delivered and installed on-site.

Standalone operation

Featuring an independent energy system, the vehicle includes its own generator and rechargeable battery bank for extended field operation.

Vehicle Layout

The vehicle's rear compartment house up to two operators, as well as operating equipment for reception, recording, transmission and various relays. The front section of the vehicle allows commanders and decision-makers full situational awareness via continuous communication with the ground units, as well as with remote HQ and operatives in the field.
